

Making an Impression

ARDEN ENGRAVING

Luxury label solutions

For more than half a century, The Arden Group have been a leader in the die-making and packaging industries, world-renowned for our high quality embossing and hot foil stamping tools.

Now we are making our mark on the luxury label industry and drawing upon our decades of experience to bring new and innovative machining concepts to enhance your product.

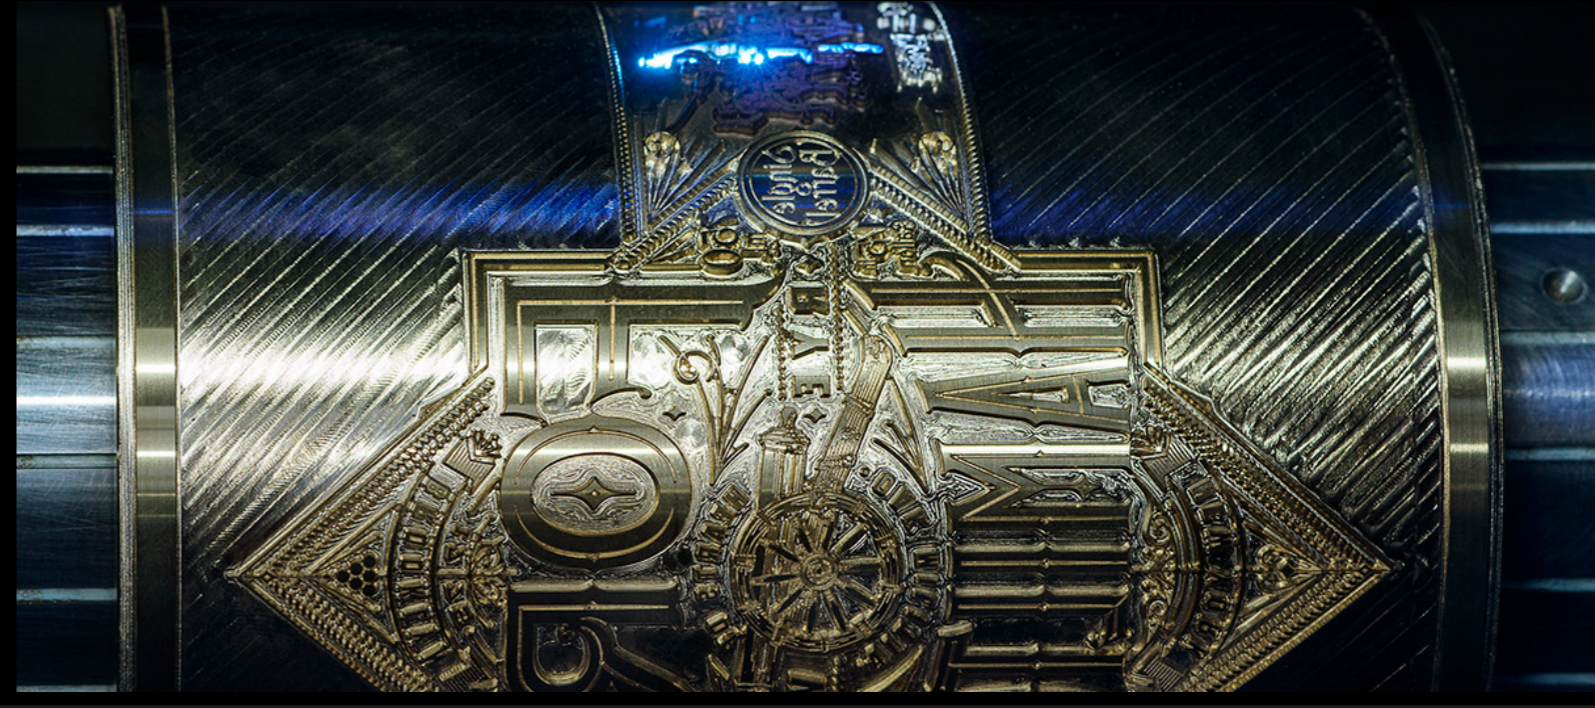

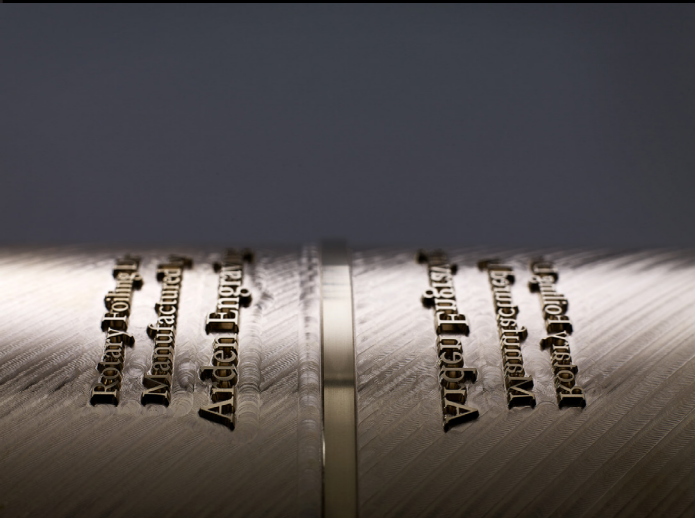

From rotary to flatbed tooling, we've got the knowledge, innovation and vision to help you make the right impression.

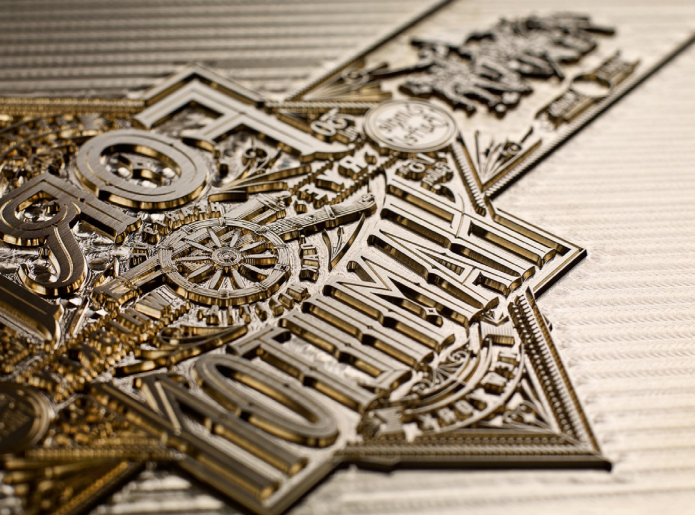

Brass Rotary Hot Foiling Cylinders

Whether machining your tools on one of our state-of-the-art CNC engraving machines or electing for the additional precision of laser engraving, you can be certain of the finest quality engraving and exacting tolerances to optimise your make-ready and machine running speeds.

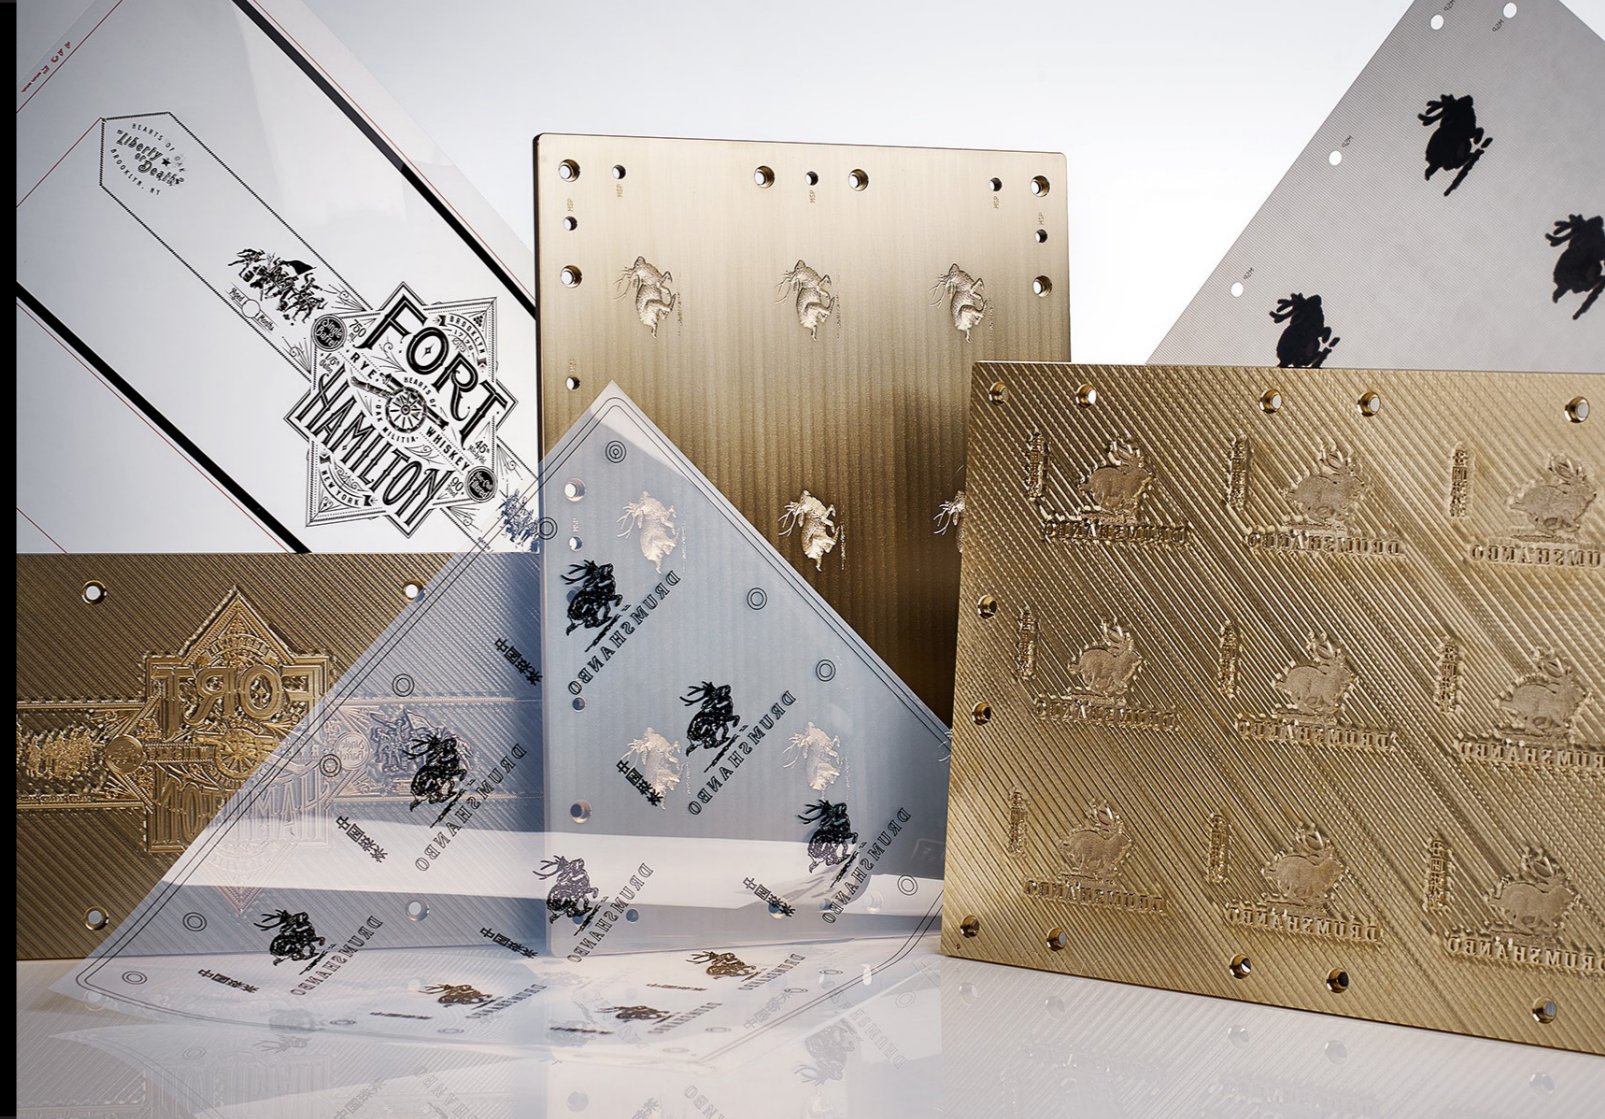

Arden Engraving is delighted to enter this bespoke market and offer a collaborative and innovative alternative for the label industry.

The perfect combination

Arden Engraving has a wealth of knowledge in the production of flat format emboss and foil stamping tools, allied to our extensive skill sets, you can be confident in our expertise to deliver tooling of the highest quality.

Sculptured embossing brings your vision to life

Our team of highly skilled CAD operators and engineers working with the latest 3D software, engraving and laser technologies are perfectly placed to manage your design concepts from artwork to the multi-level sculpture and deliver the finished label to the exacting expectations of the brand owner.

At Arden Engraving we're always looking to provide systems designed to optimise your set-up times and our MSP and HSP pins will ensure the transfer of your counter-forces to the impression plate is a quick and accurate process.

Advanced laser engraving technologies

If you're looking for that edge to ensure the finest detail of your stamping, then our advanced laser engraving technologies are the perfect option.

Due to the reduced cutting angle of the laser, we're able to engrave the smallest reversed out areas to depths not possible with conventional CNC engraving or chemical etching processes. This greatly increases the levels of detail in the foil stamping tool as you'll see from the example shown here.

In safe hands

We're proud to supply our tooling in both rotary and flatbed formats to some of the largest global label producers, who know they're in safe hands with Arden Engraving.

With a comprehensive understanding of the industry's leading machine manufacturers, we're producing complex rotary tooling for both oil and electrically heated units and supplying our flat format tools to be compatible with all the various grid fixing matrices.

With our years of experience in producing the finest quality tooling to the world's leading converters you can be confident we'll deliver on your requirements.

Collaborate and innovate

From distinguished confectioners to global high end beverage producers, we have long established our reputation amongst the luxury market, working with our client base to innovate and provide practical tooling solutions.

Whether it's intricate 3D sculpturing or the finest detail refraction hot stamping engraving, if you're looking to add value to your business and products, then you need look no further.
